- Hardware: HP, IBM RS/6000, DEC/VAX, Sun, IBM PC, Macintosh
- Operation Systems: Windows, Mac, Linux, Unix, AIX, HP-UX, Solaris, (vmware)

Artificial Intelligence: Developed multithreaded distributed AI forecasting and statistically adoptive programming.

Lawson Clients / Experience

Software Client
Sr. Technical Consultant

Lawson project management and development

- Designed and coded a custom time entry system for a large school district including special modules for employee pay equalization, transportation routing and time entry, and a full featured additional pay module.

- Designed and programmed a custom revenue accounting system which interfaced with AP, AR, and GL. Maintained project plan throughout each phase. This module maintained revenue share contracts and calculations for partners based on interface data from ATM and check cashing machines. This module also included a contract administration system, which allowed users to define revenue calculations and partner contracts.

- Designed and developed massively parallel neural networked expert prediction artificial intelligence software. This expert prediction AI used 9 years worth of historical data and statistically computed and processed millions of simulations. Reports were automatically

created for superior modelines. Written in Perl. Stored in MySql. Data was imported into SAS for human analysis.

- Custom development and maintenance of HR/Payroll programs and reports in addition to user support.

- Created 401k export programs for Milliman and Peris.

System Administration
- Provided assistance and training for Lawson system administration and maintenance including installation of MSPs, ESPs, CTPs and various upgrades and patches in 8.0.3 environment.
- Implementation of Lawson NT transition to Unix. Created sizing specifications for new hardware; purchased the hardware, built hardware and managed systems.
- Lawson installations for new clients and upgrades for current clients.
- Lawson System Administration, development, and support. (NT and Unix).
- Unix and Linux Administration – AIX, HP, Solaris, Mandrake as well as web and email hosting.
- Maintenance of security within Lawson, NT, and Unix. Limited network security including ssh, tunneling, and various VPNs.

Business Development Client
Sr. Consultant
- Installation, upgrade and administration of Lawson servers residing on IBM RS/6000 & HP9000 computer systems.

- Database administration for Lawson with Oracle, LADB, Informix, and Sybase.

- Installation and administration of Apache and Netscape Web Servers working in conjunction with the Lawson Web products.

- Development of a custom web based time reporting system. Taught and subsequently managed clients' staff providing ongoing guidance and assistance.

- Assisted client in the creation of a custom interface from Lawson Payroll into ADP, and from ADP back into Lawson.

- Programmed and performed on-site testing of multiple interface programs.

- Developed and implemented custom software for a variety of clients.

Web Design Client
Webmaster
- Created and maintained custom web applications facilitating online product ordering for this specialty advertising/promotional materials company.

Developed in Perl, C, HTML, Unix Shell and CGI Scripting; implemented via Apache Web Server on Linux. (Way before Linux was cool)

Software Client
Software Designer

- Designed and coded a fully networked interactive gaming environment. Users were able to dial in via modem and wager in various games through a BBS.   All games were coded as externals for the Hermes BBS and the Macintosh platform in Pascal.

Lawson Education / Certifications

- Lawson Web Installation, Development, and Implementation
- Lawson / Oracle
- Lawson Installation (Both NT and UNIX)
- Lawson Administration (Both NT and UNIX)
- HP System Administration I & II
- Informix Database Administration (NT)
